

## 2022 Nourse Farm Strawberries

### Sold in Bundles of 25

**Honeoye** strawberry **early mid season** has been a top variety for over 30 years. It combines winter hardiness, high productivity, good appearance and color, together with an excellent, firm, large-sized berry. The large berries are easy to pick and the plants produce high yields over a long fruiting season, making it our most consistent berry producer. Home gardeners will also appreciate its excellent freezing quality. Optimum flavor is produced by growing this variety in medium to light soil.

**Sparkle** is the best strawberry for jam and freezing. **June bearing, late mid-season**, Sparkle has been known for flavorful, high-quality, attractive fruit for over 60 years. You'll be rewarded with a nice crop of tasty, medium-sized berries by not allowing the bed to become too thick. An extremely vigorous variety, Sparkle is an excellent choice for home gardeners and pick-your-own operations in northern climates. Heirloom quality - recommended for beginners!

**Allstar** **June bearing, mid-season** produces a good crop of large, light-colored, sweet berries. Glossy, firm fruit makes this variety excellent for fresh eating. This widely adapted variety has performed consistently well from the East to central Midwest. It is highly resistant to red stele, with intermediate resistance to Verticillium wilt.

**Jewel** performs well over a wide range of growing conditions. Jewel strawberry is our #1 **midseason variety**. Jewel has large berries with superb quality and flavor. Excellent for freezing. Plants have moderate winter hardiness. Care must be taken at renovation to maintain a good plant stand.

**AC Wendy** **Early Season, June bearing** firm, bright red colored flesh. Wendy has excellent fresh flavor. Plants are vigorous and runner well. They are moderately resistant to powdery mildew and red stele, but susceptible to verticillium wilt. Highly productive.

**Evie 2 day-neutral\*** strawberry is easier to grow, higher yielding and less sensitive to the warm summer temperatures that shut down day-neutral production in the East and Midwest. Bears fruit 12-14 weeks after planting. Berries have an attractive red color, good flavor and maintain good size.

**San Andreas** strawberry is a **moderate day-neutral\*** with a production pattern very similar to Albion. Plant vigor for San Andreas is somewhat higher than for Albion early in the season, but berry size throughout the fruiting season is similar to Albion. The fruit color for San Andreas is slightly lighter than for Albion, and it has similar post harvest characteristics. The flavor of San Andreas is very good and it also shows good disease resistance.

**\*Day-neutral strawberries** will continue to set and ripen fruit all summer long until a hard frost puts them into dormancy. Day-neutral refers to the light sensitivity of the variety. Day-neutral strawberries will blossom and set fruit no matter how long or short the days are.
